

BLACK PRINCE

SwissStop Black Prince COMPOUND

EXCELLENT MODULATION FOR CARBON RIMS

STOPPING DISTANCE

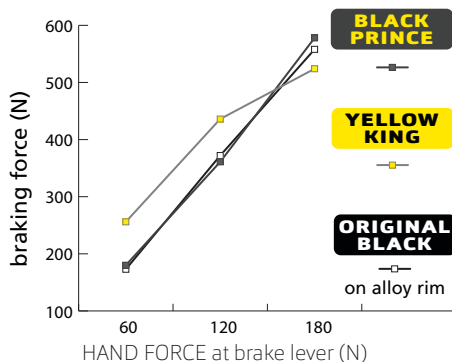

STOPPING DISTANCE (m), 60 km/h -0, wet conditions

BETTER BRAKE PERFORMANCE IN WET CONDITIONS

- increased braking force in wet conditions means shorter stopping distances
- braking force increases progressively with additional lever force, resulting in better control of braking in wet conditions

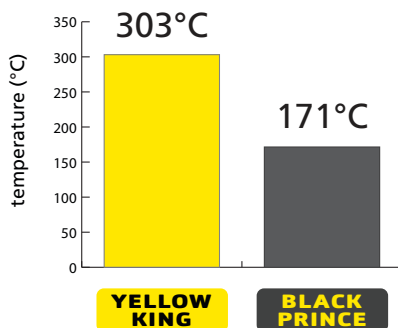

MODULATION

EXCELLENT MODULATION

- more linear braking performance - lever force vs. braking force
- easier to apply lower braking force - better fine control or 'feathering' of brakes
- braking force continues to increase with lever pull
- higher maximum braking force

TEMPERATURE

LOWER TEMPERATURES

- significantly lower maximum temperatures measured during high speed deceleration testing
